

Hoopa.—Mr. Chapman brings word from Hoopa that appearances are a little less indicative of an Indian outbreak than last week. Capt. Underwood has succeeded in getting thirty guns from the Indians and has made a demand, which they are made to understand is in earnest, for all the guns in their hands. The Indians are divided in their councils—some wishing to comply with the demands of Capt. Underwood, while others state that they never will yield their arms, but will fight if the demand is persisted in. The Indians obtain the most of their food from the river, and the majority of them will probably desire to preserve peace and have access to their fisheries, which privilege they would lose if hostilities are commenced. There are about seventy-five guns in the hands of the valley Indians and if Capt. Underwood is fortunate in obtaining possession of them, there will be but little danger of an outbreak.

It was one of the most respectable institutions, where style and effect were carefully studied. The choir were placed behind the pulpit, and facing the congregation. It was communion Sabbath. Services were opened with a voluntary on a miserably poor organ. The players were a lady, who, as she entered the church and took her seat, left the impression on my mind that I was attending some musical exhibition, for though her hair dress, her head was covered, her hair elaborately braided, and she wore a fair quantity of ornaments. Her playing consisted of a number of fashionable airs, interspersed with some of the popular songs of the day. The tune tremulo-well and trumpet were successively employed, and crescendo and diminishing followed closely on each other's footsteps. After playing some minutes, she struck into an anthem, and the</p>	<p>The London Engineer gives the following description of the method of manufacturing the iron plates used for making new steam engines of war.</p> <p>The iron plates were first heated in a furnace, and then rolled into the shape of a barrel, and then flattened into the shape of a plate.</p> <p>The plates were then rolled into the shape of a barrel, and then flattened into the shape of a plate.</p> <p>The plates were then rolled into the shape of a barrel, and then flattened into the shape of a plate.</p>	<p>The early fruitfulness of nearly every variety of trees cultivated in the garden of California, has already been ascribed to a particular property in the soil.</p> <p>It is not uncommonly said that the fruitfulness of the trees is due to the abundance of water in the soil.</p> <p>It is not uncommonly said that the fruitfulness of the trees is due to the abundance of water in the soil.</p>	<p>How many who read this question can answer it? PRECISION OF FRUIT TREES.

The early fruitfulness of nearly every variety of trees cultivated in the garden of California, has already been ascribed to a particular property in the soil.

It is not uncommonly said that the fruitfulness of the trees is due to the abundance of water in the soil.

It is not uncommonly said that the fruitfulness of the trees is due to the abundance of water in the soil.

WHAT IS AMBER?

How many who read this question can answer it? Amber. What is amber? why amber is the end of a transparent substance, something made in nature, and is found in the fossiliferous strata.

It is not uncommonly said that the fruitfulness of the trees is due to the abundance of water in the soil.

It is not uncommonly said that the fruitfulness of the trees is due to the abundance of water in the soil.
